YKK VIET NAM – HA NAM BRANCH

Vislon® Magnetic Closure

VISLON® with Magnetic Closure zipper is a product that has magnets embedded in the left and right openings. The magnetic force of the magnets allows the zipper to be closed simply by bringing the openings closer together. Because it is easy to operate without looking at the product, it is expected to be used in a wide range of fields, including for quick clothing changes in sportswear, children's wear, and universal fashion.

Wave-less Tape Zipper

Zipper that provides anti puckering effect during sewing. By reducing sewing shrinkage by changing the weave structure at the tape sewing position, the tape reduces the puckering caused by sewing.

Coil Zipper with Fold-over Tape

This zipper is effective in both reducing sewing costs and improving garment quality by reducing sewing man hours and reducing thickness in the finished product by placing a piping structure in the tape section thus providing a tape folding function in the sewing process.

Aluminum Alloy Zipper

YKK's new aluminum alloy metal zipper is approximately 40% lighter than standard metal zipper, making it a great choice for lightweight fabrics while keeping the luxurious feel that genuine metal offers.

AquaGuard® NATULON® Coil Zipper with Sublimation Printing

YKK's Aquaguard® Zipper is now available with sublimation printing, offering flexibility in design without compromising its unmatched performance. The surface of the tape comes in three types of appearance: shiny transparent, matte colored and matte transparent. *Sublimation printing is available only in specific patterns.

AiryString®

AiryString® tapeless zippers allow you to sew elements directly to the fabric. It creates a sense of unity between the zipper and the fabric, and offers customers unprecedented design possibilities for their products. The elimination of tape contributes to the weight reduction of the final product and that makes it easier to match with all kinds of fabrics.

NATULON® Plus® Zipper with Recycled Zinc Slider, Dyed with Recycled Dyeing Agent REVECOL®

NATULON Plus® zipper features a higher ratio of recycled material with its tape, thread and elements all made from recycled polyester. Coupled with the slider which is also made from recycled zinc from post industrial waste and REVECOL®, the dyeing agent made from recycled vegetable cooking oil, this zipper is one of the most sustainable products YKK has to offer.

YZiP® NATULON® in Solution-dyed Yarn

Solution Dye Zipper features material components that are produced with pigment prior to zipper production process, which eliminates the need for traditional water-dye processing & greatly reducing the amount of water used in the overall production process. Recycled tape now is available for No.3 Metal zipper.

VISLON® with Revived Top Stop

VISLON® with Revived Top Stop features a specially designed top stop that allows for easy removal & repair of the slider. This allows customers, repair shops to easily remove sliders from the garment, contributing to a more sustainable garment lifecycle.

Polyurethane-laminated Zipper with Custom Printing

YKK Polyurethane-laminated zipper provides a decorative shiny or matte appearance through the addition of a PU film applied onto the zipper tape. A logo printed PU zipper with custom logo based on customer requirements.

VISLON® Flat with Rubberized Paint Slider

VISLON® Flat zipper has square-shaped elements which are eye-catching on garments. Various elements options are available, including mirror-like finish, metallic color, inkjet printing, iridescent color, shiny black, etc.

*Slider with a unique rubber feel/touch and matte base appearance.

VISLON® Bone Shape in Mirror-like Finish

This Vislon® zipper with unique teeth that are inspired by the shape of bones has metal foil printing, giving it a elegant mirror-like finish. The zipper offers light-weight feature while maintaining the luxurious look of a metal zipper.

AquaGuard® CONCEAL® Zipper

Conceal® AquaGuard®, with new lamination process available in Vietnam, brought has a notable improvement in adhesive strength, reducing the risk of damage along the slit. Thanks also to the invisible structure, the slider runs through the teeth without touching the film, mitigating the friction that is typically caused between the slider and the film.

METALLION® "A-flash-of-color" Type

METALLION® zipper is a coil zipper with metallic color elements. The elements come in shiny and matte type. The shiny type will be an attention grabber on your garment, while the matte type can add a vintage look on your garment. With reverse split type, shiny elements will slightly show between zipper tapes create "a-flash-of-color" type.

METALUXE® with Colored Teeth

METALUXE® zipper is a VISLON® zipper that features a slimmer element shape and metallic element to achieve an elegant & luxurious metal look, with less weight as it uses plastic material instead of metal! Now colored teeth is available!
