Cautions for Washing process :

1. As with standard metal zipper, there is a risk of shaving when the zipper comes in contact with the drum if the zipper is opened. Please keep the zipper closed during washing.
2. This product is developed for cotton pants, so it is not compatible with hard washing or post-dyeing for jeans. Please use the general one-wash and bio-wash conditions for cotton pants: pH 4.5 to 9 and temperatures from room temperature to 60°C. High temperatures and strong alkalis above pH 12 may cause color fading.

※ Before using the actual bulk product, please confirm with a small sample in advance.
We appreciate your understanding and cooperation.
